PROFILE SUMMARY

Enthusiastic and detail-oriented AI & ML student with a strong foundation in mathematics, programming, and data science. Proficient in Python, machine learning algorithms, and data preprocessing techniques, with hands-on experience in projects involving supervised and unsupervised learning, deep learning, and natural language processing. Passionate about leveraging data-driven approaches to solve real-world problems. Adept at using tools like TensorFlow, Scikit-learn, Pandas, and SQL. A quick learner and effective communicator, committed to continuous learning and innovation in the field of artificial intelligence.

EDUCATION

10th (CBSE) KENDRIYA VIDYALAYA BALLARI	Bandihatti rd, Cowl Bazaar, Ballari
12th BEST RESIDENTIAL SCHOOL & COLLEGE	Hospet Rd, Allipura, Ballari
Degree RAO BAHADUR Y. MAHABALESWARAPPA ENGINEERING COLLEGE	vijaya nagar, cantonment, Ballari

SKILLS

Languages

- python
- sql
- c
- c++ etc.

Libraries/Frameworks

- NumPy
- Pandas
- TensorFlow etc.

Machine Learning

- Supervised & Unsupervised Learning
- Data Preprocessing
- Natural Language Processing(NLP)

Data Visualization

Power BI / Tableau(for dashboards)

LANGUAGES

English

Fluent

Telugu

Fluent

Kannada

Basics

Hindi

Intermediate

PROJECT

AI-POWERED BUSINESS PROCESS AUTOMATION SYSTEM(BPAS)

2025 – 2025

- Designed and implemented an AI-based system to automate Repetitive business tasks such as invoice processing, email classification, and report generation.
- Integrated Natural Language Processing (NLP) and Optical Character Recognition (OCR) to extract and analyze data from documents and emails.
- Used Python, spaCy, and Tesseract OCR for text extraction and classification.

- Automated decision-making workflows using rule-based logic and machine learning classifiers, reducing manual workload by 70%.
- Deployed the solution on a local server/cloud using Flask API for integration with existing business tools.
- Improved operational efficiency, reduced human error, and shortened processing time by 50%.

CREDIT CARD FRAUD DETECTION

2024 – 2024

- Developed a machine learning model to detect fraudulent credit card transactions using Python and Scikit-learn.
- Worked with an imbalanced dataset of 284,807 real-world transactions, using SMOTE to balance the classes.
- Trained and tested various classification models (Logistic Regression, Random Forest, XGBoost), achieving 94% precision and 91% recall.
- Implemented feature scaling and PCA for dimensionality reduction and faster model training.
- Deployed the final model as a REST API using Flask for real-time fraud detection.
- Visualized results with confusion matrix and ROC curve for model evaluation.
